

EL-09: Safety Performance Measurers

OTHR uses Safety Performance Measures and Reports to monitor the effectiveness of its SMS.

Measurable Safety performance goals are set in the Annual Safety Report to ONRSR each year and performance is measured against these goals.

Key Performance Indicators (KPI) are used to measure safety performance and assess whether safety performance objectives are being met.

Safety Performance information is communicated within the organisation via toolbox meetings, newsletters, the OTHR website, monthly general meetings and Management Committee meetings.

The information is also included in each annual safety performance report.
